

SHREYASH SRIVASTAVA

Full-Stack Software Engineer

+91-9129126195 | shreyashiitr22@gmail.com | Roorkee, India

[Portfolio](#) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with a proven foundation in architecting highly scalable web applications, highlighted by securing over \$1,500 in global hackathon prizes. Currently expanding expertise into Applied AI to engineer intelligent, data-driven systems, while maintaining a strong secondary focus on Web3 and decentralized technologies. Experienced in building end-to-end payment platforms, real-time multiplayer ecosystems, and leading cross-functional design and development teams.

EDUCATION

Indian Institute of Technology (IIT) Roorkee

Bachelor's Degree

Roorkee, India

Aug. 2022 – May 2027

EXPERIENCE

SolarSquare

Software Engineer Intern

Gurugram, Haryana

June 2026 – Sept. 2026

- Engineered **Akagami**, an ultra-fast rule engine HTTP service built natively on the Bun runtime and Bun.serve(), entirely bypassing Node.js/Express overhead to power a real-time solar-sales nudge system.
- Designed an in-memory caching registry that resolves complex multi-level taxonomies in exactly two database queries, achieving zero database I/O during rule evaluation and validation workflows.
- Developed a recursive AST validation walker utilizing JSON-Logic to strictly enforce type-safety, allowed operators, and structural constraints at write-time, fully preventing invalid business rules from persisting to PostgreSQL.
- Built a high-throughput runtime evaluation pipeline supporting batch processing, custom set operators, and a priority-based deduplication algorithm to seamlessly deliver optimized sales interventions.
- Implemented custom database exception-mapping middleware via Prisma ORM to intercept and translate internal errors into precise, client-safe HTTP statuses, integrating structured Winston logs for trace auditing.

E-Summit, IIT Roorkee

Senior Manager

Roorkee, India

Oct. 2023 – Feb. 2024

- Led cross-functional teams in website development and digital event branding, optimizing digital engagement for over 10,000 participants.
- Managed the deployment of online platforms supporting high-traffic workshops, startup expos, and speaker sessions.

Thomso Cultural Fest, IIT Roorkee

Lead Designer

Roorkee, India

Oct. 2023 – Oct. 2024

- Spearheaded the UI/UX and web design team, establishing a cohesive brand identity across all digital touchpoints.
- Crafted high-impact website interfaces and visual assets utilizing Figma, driving digital engagement across a diverse student body.

ACHIEVEMENTS

ETHGlobal HackMoney

Winner – \$1,000 Prize

Remote

2026

- Collaborated to architect a highly scalable Web3 financial solution, securing the top prize among 500+ global competitors.
- Designed smart contract logic and established seamless frontend interactions utilizing Next.js and TypeScript.

ETHGlobal New Delhi

World Track Winner – \$500 Prize

New Delhi, India

2025

- Engineered "GhostLink," a decentralized chat application enabling 100% end-to-end encrypted communication to win the global World Track.
- Programmed secure cryptographic messaging protocols to guarantee zero-knowledge server routing.

PROJECTS

ChatPay | *Next.js, Node.js, Prisma, PostgreSQL, WebSockets*

[GitHub](#) | [Live](#)

- Developed a digital payments platform supporting P2P transfers and QR checkouts, architected to handle 500+ concurrent simulated transactions without race conditions.
- Integrated an encrypted chat system using TweetNaCl (X25519 + XSalsa20-Poly1305) relayed via WebSockets.
- Orchestrated a microservices backend including a BullMQ/Redis job queue for async off-ramp payouts via Razorpay.

DreamSnap AI | *React, TypeScript, Node.js, Express, PostgreSQL, Prisma, AWS S3, FLUX*

- Engineered an AI-powered SaaS platform for personalized image generation by fine-tuning FLUX LoRA models on user datasets and serving custom image synthesis through prompt-driven workflows.
- Architected a pluggable ML execution layer supporting both Fal.ai-managed inference and self-hosted GPU workers, reducing operational costs while maintaining a unified API and user experience.
- Built an asynchronous job-processing pipeline with PostgreSQL queues, worker coordination, progress tracking, and automated model/image lifecycle management.
- Optimized asset handling through AWS S3 presigned uploads and implemented secure multi-tenant authentication, authorization, and data isolation using Clerk and Prisma.

Cyberscape | *React, TypeScript, Canvas API, WebSockets, Node.js*

[GitHub](#) | [Live](#)

- Constructed a real-time multiplayer 2D grid world supporting 50+ concurrent users with sub-50ms latency.
- Optimized native HTML Canvas API rendering for 32px tiles, custom map templates, and interactive spatial elements.
- Maintained a robust WebSocket connection for sub-second, server-side validated WASD avatar movement.

PayFlow | *React, TypeScript, Sui Move, Wagmi, Yellow Network*

[GitHub](#) | [Live](#)

- Formulated a unified cross-chain payroll system, reducing standard Web3 payroll runs by 98% (from 100+ transactions to 2).
- Leveraged Sui Programmable Transaction Blocks (PTBs) to batch up to 1,024 payment operations into single atomic executions.
- Incorporated Yellow Network state channels for gasless batching alongside LI.FI SDK for intelligent cross-chain routing.

Survey App | *React, TypeScript, Express, PostgreSQL, Prisma*

[GitHub](#) | [Live](#)

- Built a scalable web application capable of handling 1,000+ concurrent votes for interactive multiple-choice survey polls.
- Secured active API routes utilizing standard JWT authentication tokens and bcrypt password hashing mechanisms.

SKILLS

Languages: JavaScript, TypeScript, HTML/CSS

Frontend: React.js, Next.js, Tailwind CSS, Recoil

Backend: Node.js, Express.js, Hono, OpenAPI, WebSockets

Databases & Brokers: PostgreSQL, MongoDB, Redis, Prisma ORM, BullMQ, Pub/Sub

DevOps & Tools: AWS, Docker, Cloudflare, Vercel, Render, Git, Figma
